What happens to your body in dengue?

Dengue is a viral infection. In dengue you may have sudden onset of fever, headache, muscular & joint pain. Platelet count may drop below normal level.

How ANBUTA PLUS helps in dengue?

- 4 **ANBUTA PLUS** activates bone marrow cells hence improves platelet count.
- 4 **ANBUTA PLUS** activates macrophages and helps boost the immune system. Activated macrophages clean the system of several pathogens, including virus.
- 4 Activation of macrophages with **ANBUTA PLUS** increase the activation of overall defence system and helps to produce & activate various cells of immune system.
- 4 Upon activation of macrophages, **ANBUTA PLUS** increases the number of CD8+ cells, which are cytotoxic cells that can detect & kill virus bearing cells.
- 4 **ANBUTA PLUS** enhances the innate defence of the body increasing the natural defence mechanism.
- 4 **ANBUTA PLUS** is well tolerated in patients of all age groups and has been used by thousands of patients in several countries with no adverse effects reported.

How to use ANBUTA PLUS?

- 4 Strike the bottom of the bottle on the palm of your hand 15 times before taking **ANBUTA PLUS**.
- 4 Put 10 drops under the tongue and leave for 30 seconds before swallowing. Take 10 drops of **ANBUTA PLUS** three times a day.
- 4 Do not eat or drink anything for 30 minutes before or after taking **ANBUTA PLUS**.
